# DESCRIPTION

The following specifications are applied to the following TFT-LCD module.

<u>Product Name :</u>    VVX10F087J00

<u>Production factory:</u>    Panasonic Liquid Crystal Display Co., Ltd.

<u>Country of origin:</u>    Japan

<u>General Specifications</u>

| | | |
|---|---|---|
| Display size | : 10 | (inch) |
| Effective display area | : (H) 220.32 × (V) 123.93 | (mm) |
| Number of pixels | : (H) 1,920 × (V) 1,080 | (pixels) |
| Pixel pitch | : (H) 0.11475 × (V) 0.11475 | (mm) |
| Pixel density | : 221 | (ppi) |
| Color pixel arrangement | : B+G+R  vertical stripe | |
| Display mode | : Transmissive mode  Normally black mode | |
| Top polarizer type | : Anti-Glare  Hardness 3H (Pencil hardness (0.5kg)) | |
| Number of colors | : 16,777,216 | (colors) |
| Input signal | : eDP (Ver 1.2) 2Lane | |
| Backlight | : 28 pieces of  LED  (LED : Light-emitting diode) | |
| External dimensions | : Typ.  (H) 232.7 × (V) 138.05 × (T) 5.7 (PCB area) | (mm) |
| Weight | : Typ.  170  Max.  178 | (g)  (g) |

# 1. ABSOLUTE MAXIMUM RATINGS

## 1. 1 Environmental Absolute Maximum Ratings

| ITEM | Operating | | Storage | | UNIT | NOTE |
|---|---|---|---|---|---|---|
| | Min. | Max. | Min. | Max. | | |
| Temperature | 0 | 50 | -20 | 60 | ℃ | 1),3),5),6) |
| Humidity | 2) | | 2) | | %RH | 1),4) |
| Vibration | - | - | 7) | | Grms | - |
| Shock | - | - | 8) | | m/s² | - |
| Corrosive Gas | Not Acceptable | | Not Acceptable | | - | - |
| Illumination at LCD Surface | - | 50,000 | - | 50,000 | lx | - |

Note 1) Temperature and Humidity should be applied to the glass surface of a TFT-LCD module, not to the system installed with a module.

2) Ta≦40 ℃······Relative humidity should be less than 85 %RH max. Dew is prohibited.
   Ta＞40 ℃······Relative humidity should be lower than the moisture of the 85 %RH at 40 ℃.

3) The temperature of LCD front surface would be 65℃ in operating, it may affect the optical characteristics however it does not damage the function of the module.

4) The humidity of LCD front surface would be less than 20%RH in storage, it may affect the optical characteristics, however it does not damage the function of the module.

5) Long term operation (more than 1000 hours) with 60℃ or above may cause optical performance issue. However it does not damage the function of the module.

6) Long term storage (more than 1000 hours) with -25℃ or below may cause optical performance issue.

7) Vibration(Non-OP) : Frequency Random 5-500Hz, Acceleration 2.3Grms, 30min each axis(X, Y, Z).

8) Shock(Non-OP) : Acceleration 120G 2ms, 1 time each direction(±X, ±Y, ±Z).

## 1. 2 Electrical Absolute Maximum Ratings

(1)TFT-LCD module

$V_{SS} = 0$ V

| ITEM | SYMBOL | Min. | Max. | UNIT | NOTE |
|---|---|---|---|---|---|
| Power Supply Voltage | $V_{DD}$ | -0.3 | 4.5 | V | |
| Input Voltage for LED driver | $V_{LED}$ | -0.3 | 16 | V | |
| Input Voltage for logic 1 | VI_1 | -0.3 | 1.4 | V | 1) |
| Input Voltage for logic 2 | VI_2 | -0.3 | 11.4 | V | 2) |

Note

    1) eDP signal (Lane0_P/N, Lane1_P/N, AUX_CH_P/N)

    2) LED_PWM, LED_EN

## 2. INITIAL OPTICAL CHARACTERISTICS

The following optical characteristics are measured under stable conditions. It takes about 10 minutes to reach stable conditions. The measuring point is the center of display area unless otherwise noted.

The optical characteristics should be measured in a dark room or equivalent state.

Measuring equipment : CS-2000, or equivalent

Ambient Temperature =25 ℃, $V_{DD}$=3.3 V, $V_{LED}$=13V, fV=60 Hz ,

LED current = 25.5mA/string ( On-duty=100% )

| ITEM | | SYMBOL | CONDITION | Min. | Typ. | Max. | UNIT | NOTE |
|---|---|---|---|---|---|---|---|---|
| Contrast ratio | | CR | | 600 | 1000 | - | - | 2) |
| Response time | | Tr + Tf | | - | 26 | 35 | ms | 3) |
| Brightness of white | | Bwh | | 230 | 300 | - | cd/m$^2$ | 4) |
| Brightness uniformity | | Buni | | 62.5 | - | - | % | 4) |
| Color chromaticity （CIE） | Red | x | θ＝0 ° 1) | 0.610 | 0.640 | 0.670 | - | 【Gray scale =255】 |
| | | y | | 0.295 | 0.325 | 0.355 | | |
| | Green | x | | 0.270 | 0.300 | 0.330 | | |
| | | y | | 0.582 | 0.612 | 0.642 | | |
| | Blue | x | | 0.120 | 0.150 | 0.180 | | |
| | | y | | 0.030 | 0.060 | 0.090 | | |
| | White | x | | 0.269 | 0.299 | 0.329 | | |
| | | y | | 0.285 | 0.315 | 0.345 | | |
| Contrast ratio at 85 ° | | CR85 | φ=0°, 90° ,180°,270° 5) | 10 | - | - | - | Estimated value |
| NTSC | | - | θ=0° | - | 72 | - | % | - |
| Gamma | | - | θ=0° | - | 2.2 | - | - | - |
| Image sticking | | - | Checker pattern | Not recognized | | | - | 6) |
| Cross talk | | - | θ=0° | Not recognized | | | - | 7) |

Note  1)   Definition of viewing angle

TFT - LCD module

W

H/10

①-⑨ ： Measurement points
Brightness ： point⑤
Buni (9 points) ： Min(①-⑨) / Max(①-⑨)×100%

5) Contrast ratio at 85 °
The conditions are on horizontal & vertical axis

6) Aging :
4hours aging with checker pattern at room temperature.
Check :
After aging, turn on gray raster (127/255 level) pattern
It must not recognize within 5 seconds when hold
6% ND filter to the display side.
Display pattern for image sticking

7) It must not recognize within 5 seconds when hold 6% ND filter to the display side.

# 3. ELECTRICAL CHARACTERISTICS

## 3. 1 TFT-LCD module

Ta = 25℃, Vss = 0 V

| ITEM | | SYMBOL | Min. | Typ. | Max. | UNIT | NOTE |
|---|---|---|---|---|---|---|---|
| Power supply voltage | | $V_{DD}$ | 3.0 | 3.3 | 3.6 | V | |
| Power supply current | | $I_{DD}$ | - | 174 | 460 | mA | 1) |
| Ripple voltage of power supply | | $V_{DDR}$ | - | - | 150 | mV | |
| Input voltage for LED driver | | $V_{LED}$ | 11.4 | - | 13.65 | V | |
| Logic signals input voltage | High | VIH | 2.35 | - | - | V | LED_EN LED_PWM 2) |
| | Low | VIL | - | - | 0.75 | | |
| Logic signals output voltage1 | High | VOH | 2.90 | - | - | V | LED_FAIL IOH : 10uA IOL : 0.1mA |
| | Low | VOL | - | - | 0.25 | | |
| Logic signals output voltage2 | High | VOH | 2.30 | - | - | V | HPD |
| | Low | VOL | - | - | 0.60 | | |

Note  1)  Typ：fV=60.0Hz, $V_{DD}$=3.3V, and display pattern is white raster.

   Max：fV=60.0Hz, $V_{DD}$=3.0V, display pattern is pixel checker(white and black).

Voltage of IF connector terminal of T-con PCB.
(IR drop of FPC cable is excluded.)

2)  Input circuit

|  | Min. | Typ. | Max. |
|---|---|---|---|
| LED_EN | : 0.5MΩ | 1.0MΩ | 1.5MΩ |
| LED_PWM | : 1.2MΩ | 2.0MΩ | 3.8MΩ |
## 3. 2 Backlight unit

| ITEM | | SYMBOL | Min. | Typ. | Max. | UNIT | NOTE |
|---|---|---|---|---|---|---|---|
| Power Consumption | | Pbl | - | 2.45 | 3.02 | W | 1) |
| PWM | Duty | PD | 1 | - | 100 | % | |
| | Frequency | PF | 100 | - | 360 | Hz | |
| LED Life time | | - | - | 30,000 | - | h | 2), 3) |

One Backlight Unit : 1 LED Array
One LED Array : 4 LED String
One LED String : 7 LED package

Note  1)  PWM on-duty=100%

   2)  Life time of LED is defined as follows. The life is estimated as the time at which brightness of the LED is 50%  compared to that of initial value at that typical forward current on condition of continuous operating at $25 \pm 2$℃

   3)  LED current value is If = 25.5mA
# 4. BLOCK DIAGRAM
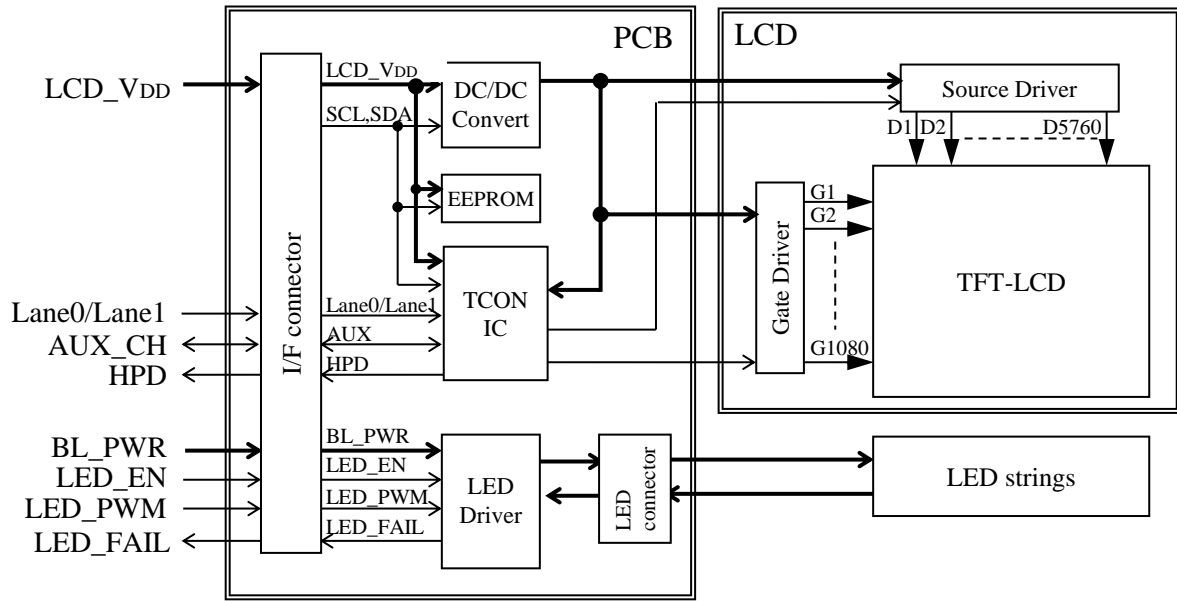

# 5. INTERFACE PIN ASSIGNMENT

## 5. 1 Pin assingment

Connector's Part Number : HD2S030HA1  (Maker : JAE)

| PIN No. | SYMBOL | I/O | DESCRIPTION | Note | PIN No. | SYMBOL | I/O | DESCRIPTION | Note |
|---------|--------|-----|-------------|------|---------|--------|-----|-------------|------|
| 1 | LED_FAIL | O | Abnormal detection of Backlight | 6) | 16 | LCD_GND | - | GND (0V) | 2) |
| 2 | H_GND | - | High Speed Ground (0V) | 2) | 17 | HPD | O | Hot plug detection | |
| 3 | Lane1_N | I | Complement Signal Link Lane 1 | | 18 | BL_GND | | | |
| 4 | Lane1_P | I | True Signal Link Lane 1 | | 19 | BL_GND | - | GND (0V) | 2) |
| 5 | H_GND | - | High Speed Ground (0V) | 2) | 20 | BL_GND | | | |
| 6 | Lane0_N | I | Complement Signal Link Lane 0 | | 21 | BL_GND | | | |
| 7 | Lane0_P | I | True Signal Link Lane 0 | | 22 | LED_EN | I | Enable signal for Backlight | 4) |
| 8 | H_GND | - | High Speed Ground (0V) | 2) | 23 | LED_PWM | I | Brightness control of Backlight | 4) |
| 9 | AUX_CH_P | IO | True Signal Aux Channel | | 24 | SDA | IO | I2C-bus Data | 5) |
| 10 | AUX_CH_N | IO | Complement Signal Aux Channel | | 25 | SCL | I | I2C-bus Clock | 5) |
| 11 | H_GND | - | High Speed Ground (0V) | 2) | 26 | BL_PWR | | | |
| 12 | LCD_$V_{DD}$ | P | Power supply for LCD | 1) | 27 | BL_PWR | P | Power supply for Backlight | 3) |
| 13 | LCD_$V_{DD}$ | | | | 28 | BL_PWR | | | |
| 14 | BIST | I | Keep open or connect to GND | | 29 | BL_PWR | | | |
| 15 | LCD_GND | - | GND (0V) | 2) | 30 | GND | - | GND (0V) | 2) |

Note  1)   All pins should be connected to the power supply for LCD on the customer's product.

2)   All pins should be connected to GND(0V) on the customer's product.

3)   All pins should be connected to the power supply for Backlight on the customer's product.

4)   H=on (active), L=off (inactive)

5)   Keep open. (It is no problem because this pin has an internal pull-up.)
6)   H=Normal state, L=Abnormal state

PIN No.1          PIN No.30

Note  1)  Definition of gray scale :

Color(n) ・・・・Number in parenthesis indicates gray scale level.

Larger n corresponds to brighter level.

2)  Data :  1 : High,   0 : Low

# 6. INTERFACE TIMING

## 6. 1 eDP receiver characteristics

### (1) DisplayPort Main Link Receiver Characteristics

| Symbol | Description | Min. | Typ. | Max. | Unit | Comments |
|--------|-------------|------|------|------|------|----------|
| VDIFFp-p | Differential peak-to-peak input voltage | 120 | - | 1200 | mV | For HBR. |
| VCM | DC common mode voltage | 0.7 | - | 2.0 | V | |
| RTERM | Differential termination resistance | - | 100 | - | Ω | |
| ISHORT | Short circuit current limit | - | - | 50 | mA | |
| LSKEW | Lane Intra-pair skew | - | - | 100 | ps | For HBR. |

### (2) DisplayPort AUX Channel Characteristics

| Symbol | Description | Min. | Typ. | Max. | Unit | Comments |
|--------|-------------|------|------|------|------|----------|
| UI | AUX Unit interval | 0.4 | 0.5 | 0.6 | us | |
| VAUX_DIFFp-p | AUX Differential peak-to-peak input voltage | 0.32 | - | 1.32 | V | |
| VAUX_CM | AUX DC common mode voltage | 0 | - | 2.0 | V | |
| RAUX_TERM | AUX CH termination resistance | - | 100 | - | Ω | |
| IAUX_SHORT | AUX Short circuit current limit | - | - | 90 | mA | |
| CAUX | AUX AC coupling capacitor | - | 100 | - | nF | 1) |

Note    1)    Coupling capacitor is not mounted on our PCB.

## 8. COSMETIC SPECIFICATIONS

### 8.1 Condition for cosmetic inspection

(1) Viewing zone

a) The Fig.8.1 shows the viewing angle and distance from human eyes (of inspector) to a surface of the LCD cell.

$\theta \leqq 10°$

L=300 ~ 400mm

b) Inspection should be carried out only at front surface and only in display active area + 1mm (A-zone). Cosmetic at both B-zone and C-zone are ignored. Tarnish of Fixed tape which may not affect electrical performance are ignore.
(refer to Fig. 8.2 Definition of zone)
Fig.8.1 Inspection view

(2) Environmental

a) Temperature : 25±5 ℃

b) Ambient light : 300 ~ 500 lx and non-directive when operating inspection.
300 ~ 800 lx and non-directive when non-operating inspection.

c) Backlight : when non-operating inspection, backlight should be off.

### 8.2 Definition of zone

・A-zone : Display area (pixel area)

・B-zone : Area between A-zone and C-zone

・C-zone : Fixed tape area
Fig. 8.2  Definition of zone

## 8.3 Cosmetic specifications

When displaying conditions are not stable (ex. at turn on or off), the following specifications are not applied.

| Inspection condition | Zone | No | ITEM | | | Max. acceptable number | Unit | Note |
|---|---|---|---|---|---|---|---|---|
| Operating inspection | A | 1 | Dot defect | Bright dot | Random | 2 | pcs | 1),,3) |
| | | | | | 2-dots | 0 | Units | 1),4),9) |
| | | | | | 3-dots | 0 | | |
| | | | | | Density | 1 | pcs/φ10mm | 1),5) |
| | | | | | Total | 2 | pcs | |
| | | | | Dark dot | Random | 5 | pcs | 2),3) |
| | | | | | 2-dots | 2 | Units | 2),4),9) |
| | | | | | 3-dots | 0 | | |
| | | | | | Density | 1 | pcs/φ10mm | 2),5) |
| | | | | | Total | 7 | pcs | |
| | | 2 | Stain inclusion Dot shape [ D : ave. dia (mm) ] | D≦0.2 | | Ignore | pcs | 6),7),8) |
| | | | | 0.2<D≦0.4 | | 4 | | |
| | | | | D>0.4 | | 0 | | |
| | | 3 | Stain inclusion Line shape [ W: Width (mm) ] [ L: Length (mm) ] | W≦0.05 | | Ignore | pcs | 6),7),8) |
| | | | | 0.05<W≦0.1 | L≦0.5 | Ignore | | |

| | | 13 | Floating of fixed tape | | | Ignore | - | - |
| | | 14 | Wrinkles on fixed tape | | | Serious one is not allowed | - | - |
| | All | 15 | Warpage H:Height(mm) | H≦1.5 | | Ignore | - | 12) |
| | | | | H>1.5 | | Not allowed | | |

| Panasonic Liquid Crystal Display Co., Ltd. | Date | Jul./5/2017 | Sheet No. | IPS4 PS  2611  VVX10F087J00-1 | Page | 11-2/4 |
|---|---|---|---|---|---|---|

Note  1)  Bright dot : Count the dot that it is brighter than the judgment pattern of bright dot.

(Judgement gray level is Red : 200, Green : 200, Blue : 200)

Bright dot is ignore, if the bright dot is less than which gray level is Red : 200, Green : 200, Blue : 200.

2)  Dark dot : Count the dot that it is brightness less than 70% at white. (visible to eye)

3)  1 dot : Defect dot is isolated, not attached to other defect dot.

4)  N-dots : N-dots defect is a consecutive dot defect. Where N is 2 or greater number of defect dots,
N-dots defect excludes stain, scratch, bubble, etc.

5)  Density : Number of defect dots inside φ10mm

6)  Those stain inclusion which can be wiped out easily are acceptable.

7)  The defect which due to the stain inclusion shall be seen from the front side of the display.
The defect which due to the air bubble is judged at the place where it is seen the maximum brightness
by seeing from many angles.

8)  Diameter of stain inclusion is the maximum diameter.
Dimensional definition of scratch and stain inclusion is as follows.

$$D=(a+b)/2 \quad D=(a+b)/2 \quad D=(a+b)/2 \quad D=(a+b)/2 \quad D=(a+b)/2$$
9)  Definition of the linked dot defect : 2-dot defect is counted as "2-dot defect: 1 set" when 1 out of 6 dots
except for the vertical direction against nearby dot defect is a dot defect.
Dot defects in the vertical direction against nearby dot defect are not allowed.

※  If there is a defect in any of the location of the "△" against "×" in the right figure below,
it is defined as the linked dot defect.

| B | R | G | B | R | G | B | R | G |
|---|---|---|---|---|---|---|---|---|
|   | △ | △ | △ |   |   |   |   |   |
| B | R | G | B | R | G | B | R | G |
|   | △ | × | △ |   |   |   |   |   |
| B | R | G | B | R | G | B | R | G |
|   | △ | △ | △ |   |   |   |   |   |

10)  Sample for judgment of defect visibility (Limit Sample) shall be agreed if necessary.
The other defect items shall be added if necessary.

| Panasonic Liquid Crystal Display Co., Ltd. | Date | Jul./5/2017 | Sheet No. | IPS4 PS   2611   VVX10F087J00-1 | Page | 11-3/4 |
|---|---|---|---|---|---|---|

Note  11) Visible through 5% ND filter. It must be No-count if not visible by 5%ND filter.

12) Dimensional warpage of LCD module is as follows.
LCD module is measured the warpage setting on the jig for warpage measurement.
It is measured warpage 7 points of between the surface of LCD and the standard surface of jig.
Jig for warpage should be the mutually agreed one.

13) In order to protect the surface of the top polarizer,
the protection film is stuck on the polarizer while shipment.
Definition of zone refer to Fig.8.2.
A-zone : Any stain and bent and dent are ignored unless anything affects polarizer.
B-zone : Any stain, bent, dent, bubble and peeling are ignored.

## 9. PRECAUTION

Please pay attention to the followings when a TFT module with a backlight unit is used, handled and mounted.

### 9.1 Precaution to handling and mounting

(1) Applying strong force to a part of the module may cause partial deformation of frame or mold, and cause damage to the display.

(2) The module should gently and firmly be held by both hands. Never hold by just one hand in order to avoid any internal damage. Never drop or hit the module.

(3) Uneven force such as twisted stress should not be applied to a module when a module is mounted on the cover case. The cover case must have sufficient strength so that external force can not be transmitted directly to a module.

(4) It is recommended to leave a space between a module and a holding board of a module so that partial force is not applied to a module.

(5) A transparent protective plate should be added on the display area of a module in order to protect a polarizer and TFT cell. The transparent protective plate should have sufficient strength so that the plate can not touch a module by external force.

(6) Materials included acetic acid and choline should not be used for a cover case as well as other parts and boards near a module. Acetic acid attacks a polarizer. Choline attacks electric circuits due to electro-chemical reaction.

(7) The polarizer on a TFT cell should carefully be handled due to its softness, and should not be touched, pushed or rubbed with glass, tweezers or anything harder than HB pencil lead. The surface of a polarizer should not be touched and rubbed with bare hand, greasy clothes or dusty clothes.

(8) The surface of a polarizer should be gently wiped with absorbent cotton, chamois or other soft materials slightly contained petroleum benzene when the surface becomes dirty. Normal-hexane or Isopropyl alcohol as cleaning chemicals is recommended in order to clean adhesives which fix front/rear polarizers on a TFT cell. Other cleaning chemicals such as acetone, toluene and alcohol should not be used to clean adhesives because they cause chemical damage to a polarizer.

(9) Saliva or water drops should be immediately wiped off. Otherwise, the portion of a polarizer may be deformed and its color may be faded.

(10) The module should not be opened or modified. It may cause not to operate properly.

(11) A module should not be handled with bare hand or dirty gloves. Otherwise, color of a module fixed sheet and metal frame may become dirty during its storage. It is recommended to use clean soft gloves and clean finger stalls when a module is handled at incoming inspection process and production (assembly) process.

(12) Printed circuits board  part should not be held and touched. It may cause not to operate properly.

### 9.2 Precaution to operation

(1) The ambient temperature near the operated module should be satisfied with the absolute maximum ratings. Unless it meets the specifications, sufficient cooling system should be adopted to system.

(2) The spike noise causes the mis-operation of a module. The level of spike noise should be as follows:

$$-100mV \leqq \text{over- and under- shoot of } V_{DD} \leqq +100mV$$

$V_{DD}$ including over- and under- shoot should be satisfied with the absolute maximum ratings.

(3) Optical response time, luminance and chromaticity depend on the temperature of a TFT module.

(4) Sudden temperature change may cause dew on and/or in the a module. Dew makes damage to a polarizer and/or electrical contacting portion. Dew causes fading of displayed quality.

(5) Fixed patterns displayed on a module for a long time may cause after-image. It will be recovered soon.

(6) A module has high frequency circuits. Sufficient suppression to electromagnetic interference should be done by system manufacturers. Grounding and shielding methods may be effective to minimize the interference.

(7) Noise may be heard when a backlight is operated. If necessary, sufficient suppression should be done by system manufacturers.

| Panasonic Liquid Crystal Display Co., Ltd. | Date | Jul./5/2017 | Sheet No. | IPS4 PS　2612　VVX10F087J00-1 | Page | 12-1/3 |

(8) The module should not be connected or removed while a main system works.

(9) Inserting or pulling I/F connectors causes any trouble when power supply and signal data are on-state. I/F connectors should be inserted and pulled after power supply and signal data are turned off.

(10) Do not keep the LCD panel with its operation in the condition while the backlight is turned off because there is a possibility that the panel is charged up and may cause MURA.

## 9.3 Electrostatic discharge control

(1) Since a module consists of a TFT cell and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharge, persons who are handling a module should be grounded through adequate methods such as a list band. I/F connector pins should not be touched directly with bare hands.

(2) Protection film for a polarizer on a module should be slowly peeled off so that the electrostatic charge can be minimized.

## 9.4 Precaution to strong light exposure

(1) A module should not be exposed under strong light. Otherwise, characteristics of a polarizer and color filter in a module may be degraded.

## 9.5 Precaution to storage

When modules for replacement are stored for a long time, following precautions should be taken care of:

(1) Modules should be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during storage. Modules should be stored at 0 to 35℃ at normal humidity (60%RH or less).

(2) The surface of polarizers should not come in contact with any other object. It is recommended that modules should be stored in the Panasonic Liquid Crystal Display's shipping box.

## 9.6 Precaution to handling protection film

(1) The protection film for polarizers should be peeled off slowly and carefully by persons who are electrically grounded with adequate methods such as a list band. Besides, ionized air should be blown over during peeling action. Dusts on a polarizer should be blown off by an ionized nitrogen gun and so on.

(2) The protection film should be peeling off without rubbing it to the polarizer. Because, if the film is rubbed together with the polarizer, since the film is attached to the polarizer with a small amount of adhesive, the adhesive may remain on a polarizer.

(3) The module with protection film should be stored on the conditions explained in 10.5 (1). However, in case that the storage time is too long, adhesive may remain on a polarizer even after a protection film is peeled off. Besides, in case that a module is stored at higher temperature and/or higher humidity, adhesive may remain on a polarizer. The remained adhesive may cause non-uniformity of display image.

(4) The adhesive can be removed easily with Normal-Hexane or Isopropyl alcohol. The remained adhesive or its vestige on the polarizer should be wiped off with absorbent cotton or other soft materials such as chamois slightly contained Normal-Hexane or Isopropyl alcohol.

(5) The procedure of peeling protection film on polarizer is recommended as follows.
Peel off protection film from upper polarizer film with tape.
Please peel off the protection film like the below figure.

LED side

Gate IC side

Pull tab
9.7 Safety

  (1) Since a TFT cell is made of glass, handling to the broken module should be taken care sufficiently
     in order not to be injured. Hands touched liquid crystal from a broken cell should be washed sufficiently.

  (2) The module should not be taken apart during operation so that backlight drives by high voltage.

9.8 Environmental protection

  Flexible printed circuits and printed circuits board used in a module contain small amount of lead. Please follow
  local ordinance or regulations for its disposal.

9.9 Use restrictions and limitations

  (1) This product is not authorized for use in life support devices or systems, military applications or other applications
     which pose a significant risk of personal injury.

  (2) In no event shall Panasonic Liquid Crystal Display Co., Ltd., be liable for any incidental, indirect or consequential
     damages in connection with the installation or use of this product, even if informed of the possibility thereof
     in advance. These limitations apply to all causes of action in the aggregate, including without limitation breach
     of contact, breach of warranty, negligence, strict liability, misrepresentation and other torts.

9.10 Others

  Electrical components which may not affect electrical performance are subjective to change without notice because
  of their availability.

# 10. PACKING
