**1.0 GENERAL DESCRIPTION**

DV550FHM-NVT is a color active matrix TFT LCD Module using amorphous silicon TFT' s (Thin Film Transistors) as an active switching devices. This module is ELFD(Extra Large Format Display Video Wall). This module has a 55 inch diagonally measured active area with FHD resolutions (1920 horizontal by 1080 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this module can display 16.7M colors. The TFT-LCD panel used for this module is adapted for a low reflection and higher color type.

**1.2 Features**

- Extreme-LFD
- LVDS interface with 2 pixel / clock
- High-speed response
- 8-bit color depth, display 16.7M colors
- Direct LED Backlight
- DE (Data Enable) only mode
- ADS technology is applied for high display quality
- RoHS compliant
- Landscape and Portrait Display

**PROPRIETARY NOTE**

THIS SPECIFICATION IS THE PROPERTY OF BOE BJ AND SHALL NOT BE REPRODUCED OR COPIED WITHOUT THE WRITTEN PERMISSION OF BOE BJ AND MUST BE RETURNED TO BOE BJ UPON ITS REQUEST

## 1.3 Application

- High Definition Public Monitor
- Landscape and Portrait Display

## 1.4 General Specification

&lt; Table 1. General Specifications &gt;

Parameter	Specification	Unit	Remark
MDL Outline	1210.48(H)x 681.28(V)	mm	
Active area	1209.6(H)*680.4(V)	mm	
Number of pixels	1920(H) ×1080(V)	pixels	
Pixel pitch	210(H) ×RGB×630(V)	um	
Pixel arrangement	Pixels RGB Vertical stripe		
Display mode	Normally Black		
Display colors	16.7M(8bits-true)	colors	
Brightness	500(Typ.)	nit	Center point
MDL Thickness	38.34(Body)/46(Mount)	mm	
Weight	15000	gram	
Power Consumption	141(Typ.)	Watt	
Surface Treatment	Haze25% ,3H, (Front Polarizer)		
LED luminous degradation Time	50,000	Hrs	Note 1

Note 1: The LED luminous degradation Time is determined as the time which luminance of LED is 50% compare to the initial value at the typical LED current on condition of continuous operating in LCM state at 25±2 °C

**PROPRIETARY NOTE**

THIS SPECIFICATION IS THE PROPERTY OF BOE BJ AND SHALL NOT BE REPRODUCED OR COPIED WITHOUT THE WRITTEN PERMISSION OF BOE BJ AND MUST BE RETURNED TO BOE BJ UPON ITS REQUEST

**2.0 ABSOLUTE MAXIMUM RATINGS**

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

&lt; Table 2. Absolute Specifications &gt;

[VSS=GND=0V]

Parameter	Symbol	Min.	Max.	Unit	Remark
Power Supply Voltage	$V_{DD}$	$V_{SS}-0.3$	13.2	V	Ta = 25 °C
Logic Supply Voltage	$V_{IN}$	$V_{SS}-0.3$	$V_{DD}+0.3$	V	
Operating Temperature	$T_{OP}$	0	+50	°C	Note 1
Storage Temperature	$T_{ST}$	-20	+60	°C	
Operating Humidity	$H_{OP}$	20	90	%RH	
Storage Humidity	$H_{ST}$	5	90	%RH	

Note 1 : Temperature and relative humidity range are shown in the figure below.  
Wet bulb temperature should be 39 °C max. and no condensation of water.

**PROPRIETARY NOTE**

**3.0 ELECTRICAL SPECIFICATIONS****3.1 Electrical Specifications**

&lt; Table 3. Electrical Specifications &gt;

[Ta =25±2 °C]

Parameter		Symbol	Values			Unit	Remark
			Min	Typ	Max		
Power Supply Input Voltage		VDD	10.8	12	13.2	Vdc	
Power Supply Ripple Voltage		VRP	-	-	300	mV	
Power Supply Current		IDD	-	600	800	mA	Note 1
Power Consumption		PDD	-	7.2	9.6	Watt	
Rush current		IRUSH	-	-	3	A	Note 2
LVDS Interface	Differential Input High Threshold Voltage	VLVTH	+100		+600	mV	
	Differential Input Low Threshold Voltage	VLVTL	-600		-100	mV	
	Common Input Voltage	VLVC	1.0	1.2	1.4	V	
T-CON Option Selection Voltage	Input High Threshold Voltage	VIH	2.7	-	3.3	V	
	Input Low Threshold Voltage	VIL	0	-	0.6	V	

Note 1 : The supply voltage is measured and specified at the interface connector of LCM.

The current draw and power consumption specified is for VDD=12.0V,

Frame rate  $f_v=60\text{Hz}$  and Clock frequency = 74.25MHz.

Test Pattern of power supply current

a) Typ : Color Test (L0/L255)

b) Max : Horizontal 1 Line (L0/L255)

Note 2 : The duration of rush current is about 2ms and rising time of Power Input is 1ms(min)

**PROPRIETARY NOTE**

THIS SPECIFICATION IS THE PROPERTY OF BOE BJ AND SHALL NOT BE REPRODUCED OR COPIED WITHOUT THE WRITTEN PERMISSION OF BOE BJ AND MUST BE RETURNED TO BOE BJ UPON ITS REQUEST

### 3.2 Converter Electrical Specifications

&lt; Table 4. Converter Electrical Specifications &gt;

[Ta =25±2 °C]

Parameter	Symbol	Values			Unit	Remark
		Min	Typ	Max		
Power Supply Input Voltage	VDD	21.6	24	26.4	Vdc	
Power Supply Ripple Voltage	VRP	-	-	1200	mV	
Power Supply Current	IDD	-	5.56	6.5	A	
Power Consumption	PDD	-	133.44	156	Watt	PWM Duty =100%
Power Rush current	IRUSH	-	-	14	A	note1
Backlight On/Off Control Voltage	V <sub>BLON</sub> (off)	0	-	0.3	V	
	V <sub>BLON</sub> (on)	2.4	3.3	3.6	V	
Backlight PWM	High Level	2.4	3.3	3.6	V	On duty
	Low Level	0	-	0.3	V	Off duty
	Dimming Ratio	1	-	100	%	Note 2
	PWM Frequency	120	-	300	Hz	
LED luminous degradation Time	-	50000	-	-	Hrs	Note 3

Note 1 : The duration of rush current is rising time of Power Input is 10ms(min)

Note 2 :PWM Signal have to input available duty range. Between 99% and 100% Dimming Ratio duty have to be avoided. ( 99% < Dimming Ratio< 100%) , but Dimming Ratio 1% and 100% is possible.

Note 3 : The LED luminous degradation Time is determined as the time which luminance of LED is 50% compare to the initial value at the typical LED current on condition of continuous operating in LCM state at 25±2 °C

44	NC	Not Connected (1)	51	REV_SCAN	REV_SCAN
45	SELLVDS	High : VESA Low or Open: JEIDA			

Notes : 1. NC(Not Connected) : This pins are only used for BOE internal operations.

2. Input Level of LVDS signal is based on the IEA 664 Standard.

3. Pin 41 Local dimming : This pin is used for selecting Local dimming ON or OFF.

If this Pin : High (3.3V) → Local dimming ON

Otherwise : Low (GND) → : Local dimming OFF

4. Pin 45 SELLVDS : This pin is used for selecting LVDS signal data format.

If this Pin : High (3.3V) → VESA LVDS format

Otherwise : Low (GND) or Open(NC) → JEIDA LVDS format

	Vertical Blank	tVB	30	45	69	tHP	
	Frequency	fV	47	60	63	Hz	
LVDS Rx Clock	CLK Jitter	TJitter	-	-	-	ps	

## Note

1. DE Only Mode, While operation, DE signal should be have the same cycle. The input of HSYNC & VSYNC signal does not have an effect on normal operation.
2. Best operation clock frequency is 74.25 Mhz.
3. [Frequency] = [H Total] \* [V Total] \* [vertical Frame rate]  
H Total, V Total and Frame rate should operate within the range between Frequency\_Min and Max
4. Except Best operation clock frequency, FOS(Flicker & Brightness & Crosstalk, Etc.) are not guaranteed.
5. Main frequency Max is 77.97Mhz MHz without spread spectrum

&lt; Table 9. LVDS Input SSCG&gt;

Symbol	Parameter	Condition	Min	Typ	Max	Unit
$F_{LVMOD}$	Modulating frequency of input clock during SSC	F=75MHz	30	-	200	KHz
$F_{LVDEV}$	Maximum deviation of input clock frequency during SSC		-3	-	+3	%

## 5.4 Power Sequence

### 5.4.1 LCD driver circuit

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown in below

Parameter	Values			Units
	Min	Typ	Max	
T1	0.5	-	10	ms
T2	0.1	-	T7	ms
T3	400	-	-	ms
T4	200	-	-	ms
T5	5	-	-	sec
T6	0.1	-	T2	ms
T7	1	-	-	sec
T8	20	-	-	ms

Note 1: Even though T1 is over the specified value, there is no problem if the rush current is within Spec.

Note 2: The T3 / T4 is recommended value, the case when failed to meet a minimum specification, abnormal display would be shown. There is no reliability problem.

Note 3: It is recommendation specification that T8 has to be 100ms as a minimum value.

※ Please avoid floating state of interface signal at invalid period.

※ When the power supply for LCD (VDD) is off, be sure to pull down the valid and invalid data to 0V.

Note 4: T5 should be measured after the Module has been fully discharged between power off and on period

Note 5: If the on time of signals (Interface signal and user control signals) precedes the on time of Power (VLCD), it will be happened abnormal display. When T6 is NC status, T6 doesn't need to be measured

Note 6: T9: Voltage of VDD must decay smoothly after power-off. (customer system decide this value)

## 6.0 OPTICAL SPECIFICATIONS

The test of optical specifications shall be measured in a dark room (ambient luminance $\leq$ 1 lux and temperature= $25\pm 2^{\circ}\text{C}$ ) with the equipment of Luminance meter system (Goniometer system and PR730) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of  $\theta$  and  $\Phi$  equal to  $0^{\circ}$ . We refer to  $\theta_{\Phi=0} (= \theta_3)$  as the 3 o' clock direction (the "right" ),  $\theta_{\Phi=90} (= \theta_{12})$  as the 12 o' clock direction ( "upward" ),  $\theta_{\Phi=180} (= \theta_9)$  as the 9 o' clock direction ( "left" ) and  $\theta_{\Phi=270} (= \theta_6)$  as the 6 o' clock direction ( "bottom" ). While scanning  $\theta$  and/or  $\Phi$ , the center of the measuring spot on the Display surface shall stay fixed. The measurement shall be executed after 30 minutes warm-up period. VDD shall be 12.0V +/-10% at  $25^{\circ}\text{C}$ . Optimum viewing angle direction is 6 ' clock.

< Table 11. Optical Table >

[VDD = 12.0V, Frame rate = 60Hz, Ta = $25\pm 2^{\circ}\text{C}$ ]

Parameter		Symbol	Condition	Min	Typ	Max	Unit	Remark

**Note :**

1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing are determined for the horizontal or 3, 9 o' clock direction and the vertical or 6, 12 o' clock direction with respect to the optical axis which is normal to the LCD surface.
2. Contrast measurements shall be made at viewing angle of  $\theta = 0^\circ$  and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state. (See Figure 1 shown in Appendix)  
Luminance Contrast Ratio (CR) is defined mathematically.
 
$$\text{CR\&DCR} = \frac{\text{Luminance when displaying a white raster}}{\text{Luminance when displaying a black raster}}$$
3. LD ON=Local dimming enable; LD OFF=Local dimming disable.
4. The color chromaticity coordinates specified in Table 9.shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.
5. Response time is the average time required for display transition by switching the input signal as below table and is based on Frame rate  $f_V = 60\text{Hz}$  to optimize. Each time in below table is defined as Figure 2 and shall be measured by switching the input signal for "any level of gray(bright)" and "any level of gray(dark)" .

Measured Response Time		Target

7.0 MECHANICAL CHARACTERISTICS

7.1 Dimensional Requirements

Figure 3(located in Appendix) shows mechanical outlines for the model DV550FHM-NVT. Other parameters are shown in Table 12.

< Table 12. Dimensional Parameters >

Parameter	Specification	Unit
Pixel pitch	210(H) ×RGB×630(V)	um
Number of pixels	1920(H) ×1080(V) (1 pixel = R + G + B dots)	pixels
MDL Size	1210.48(H)x 681.28(V)	mm
MDL Thickness	38.34(Body)/46(Mount)	mm
Weight	15,000	gram

7.2 Anti-Glare and Polarizer Hardness

The surface of the LCD has an Anti-glare coating to minimize reflection and a coating to Reduce scratching (with front polarizer Haze 25%(typ.)).

**10.0 PACKING INFORMATION**

BOE provides the standard shipping container for customers, unless customer specifies their packing information. The standard packing method and Barcode information are shown in below.

**10.1 Packing Order**

- Put 2 EPS Bottom on the Pallet

- Put MDL into the PE Bag

- Put 10 Pcs MDL of PE bag into the EPS Bottom

Put the Top-cover on the Box (10ea MDLs per pallet) and Pack with 4 packing belts.

- Put 2 EPS Cover on the Bottom

## 11.0 PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD Module.

### 11.1 Mounting Precautions

- Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- You must mount a module using specified mounting holes (Details refer to the drawings).
- You should consider the mounting structure so that uneven force (ex. Twisted stress, Concentrated stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- Do not apply mechanical stress or static pressure on module; Abnormal display cause by pressing some parts of module during assembly process, do not belong to product failure, the press should be agreed by two sides.
- Determine the optimum mounting angle, refer to the viewing angle range in the specification for each model.
- You should adopt radiation structure to satisfy the temperature specification.
- Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
- Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane & alcohol is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene, because they cause chemical damage to the polarizer.
- Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- Do not apply static pressure on module, and avoid impact, vibration and falling.
- This module has its circuitry PCB's on the rear side and Driver IC, should be handled carefully in order not to be stressed.
- Avoid impose stress on PCB and Driver IC during assembly process, Do not drawing, bending, COF package & wire
- Do not disassemble the module.

## 11.2 Operating Precautions

- Do not connector or disconnect the cable to/from the Module at the "Power On" Condition.
- When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the module would be damaged.
- Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.
- The electrochemical reaction caused by DC voltage will lead to LCD module degradation, so DC drive should be avoided.
- The LCD modules use C-MOS LSI drivers, so customers are recommended that any unused input terminal would be connected to Vdd or Vss, do not input any signals before power is turn on, and ground you body, work/assembly area, assembly equipment to protect against static electricity.
- Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.
- Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- Design the length of cable to connect between the connector for back-light and the converter as shorter as possible and the shorter cable shall be connected directly , The long cable between back-light and Converter may cause the Luminance of LED to lower and need a higher startup voltage
- The cables should be as short as possible between System Board and PCB interface.
- Connectors are precision devices to transmit electrical signals, and operators should plug in parallel
- Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.

## 11.3 Electrostatic Discharge Precautions

- Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc.
- Do not touch interface pin directly.

**PROPRIETARY NOTE**

## 11.4 Precautions for Strong Light Exposure

- Do not leave the module operation or storage in Strong light . Strong light exposure causes degradation of polarizer and color filter.

## 11.5 Precautions for Storage

### A. Atmosphere Requirement

ITEM	UNIT	MIN	TYP	MAX
Storage Temperature	(°C)	5	25	40
Storage Humidity	(%rH)	35	50	75
Storage Life	6 months			
Storage Condition	<ul style="list-style-type: none"><li>The storage room should be equipped with a dark and good ventilation facility.</li><li>Prevent products from being exposed to the direct sunlight, moisture and water.</li><li>The product need to keep away from organic solvent and corrosive gas.</li><li>Be careful for condensation at sudden temperature change.</li><li>Storage condition is guaranteed under packing conditions.</li></ul>			

### B. Package Requirement

- The product should be placed in a sealed polythene bag.
- Product Should be placed on the pallet, Which is away from the floor, Be cautions not to pile the product up.
- As the original protective film, do not use the adhesive protective film to avoid change of Pol color and characteristic.

## 11.6 Precautions for protection film

- Remove the protective film slowly, keeping the removing direction approximate 30-degree not vertical from panel surface, If possible, under ESD control device like ion blower, and the humidity of working room should be kept over 50%RH to reduce the risk of static charge.
- People who peeled off the protection film should wear anti-static strap and grounded well.

## 11.7 Appropriate Condition for Commercial Display

-. Generally large-sized LCD modules are designed for consumer applications . Accordingly, long-term display like in Commercial Display application, can cause uneven display including image sticking. To optimize module's lifetime and function, several operating usages are required.

### 1. Normal operating condition

- . Temperature:  $20 \pm 15^{\circ}\text{C}$
- . Operating Ambient Humidity :  $55 \pm 20\%$
- . Display pattern: dynamic pattern (Real display)

### 2. Special operating condition

#### a. Ambient condition

- . Well-ventilated place is recommended to set up Commercial Display system.

#### b. Power and screen save

- . Periodical power-off or screen save is needed after long-term display.

c. As the low temperature, the response time is greatly delayed. As the high temperatures (higher than the operating temperature) the LCD module may turn black screen. The above phenomenon cannot explain the failure of the display. When the temperature returns to the normal operating temperature, the LCD module will return to normal display.

d. When expose to drastic fluctuation of temperature (hot to cold or cold to hot) ,the LCD module may be affected; Specifically, drastic temperature fluctuation from cold to hot ,produces dew on the LCD module 's surface which may affect the operation of the polarizer and LCD module

e. Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.

f. Product reliability and functions are only guaranteed when the product is used under right operation usages. If product will be used in extreme conditions such as high temperature, high humidity, high altitude, special display images, running time, long time operation, outdoor operation, etc. It is strongly recommended to contact BOE for filed application engineering advice. Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at airports, transit stations, banks, stock market and controlling systems.

3. Operating usages to protect against image sticking due to long-term static display.

a. Suitable operating time: under 24 hours a day.

(The moving picture can be allowed for 24 hours a day)

b. Static information display recommended to use with moving image.

-. Cycling display between 5 minutes' information(static) display and 10 seconds' moving image.

c. Background and character (image) color change

-. Use different colors for background and character, respectively.

-. Change colors themselves periodically.

d. Avoid combination of background and character with large different luminance.

-. Abnormal condition just means conditions except normal condition.

-. Black image or moving image is strongly recommended as a screen save

4. Lifetime in this spec. is guaranteed only when Commercial Display is used according to operating usages.

5. Module should be turned clockwise based on front view when used in portrait mode.

## 11.8 Other Precautions

### A. LC Leak

- If the liquid crystal material leaks from the panel, it is recommended to wash the LC with acetone or ethanol and then burn it.
- In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- If LC in mouth, mouth need to be washed, drink plenty of water to induce vomiting and follow medical advice.
- If LC touch eyes, eyes need to be washed with running water at least 15 minutes.

### B. Rework

- When returning the module for repair or etc., Please pack the module not to be broken. We recommend to use the original shipping packages.
